

Sealmark

Engineered to Protect

V-COAT

Liquid Applied Weather Barrier

Non Toxic Materials | No VOC

Resists Mold and Mildew

Resists Cracks

Class A Fire Rating

95% Solar Reflective

Energy Saving

Sealmark V-COAT can be applied to any surface including plywood, OSB, exterior gypsum sheathing, metal, aluminum, all masonry, cured concrete, cement board, aged vinyl, and previously painted stable substrates. Sealmark Coatings shield exterior surfaces from the harsh effects of UV rays, the most damaging element to outdoor materials. By incorporating encapsulated thermospheres, the coating achieves 95% solar reflection which resists fading and maintains its integrity over time. It boasts an impressive 400% elongation (ASTM-D-412) and withstands severe freeze/thaw cycles (ICBO SPEC), ensuring no cracks or water migration occur. Environmentally friendly and VOC-compliant, Sealmark is water-soluble before curing and won't support combustion (ASTM-E-108). Proven highly resistant to mold and mildew in tropical chamber exposure (ASTM-D03273-73T)
